

**The Just Transition from Coal to a  
Renewable Mix  
The Case Of The SITRANS Project**

**Prof. Yiannis Bakouros**  
**Chemical Engineering Department**  
**University Of Western Macedonia, Greece**

---

## What is a Just Transition?

**- Fair shift to a low-carbon economy**

**- Protects workers and communities affected by decarbonization**

**- Promotes inclusive economic development**

**- Environmental, economic, and social justice**

# From Lignite to Renewables

**Challenges:** job losses, community disruption

**Opportunities:** innovation, clean jobs, sustainability

**Need for reskilling and infrastructure investment**

# EU Policy for Just Transition

- European Green Deal
- Just Transition Fund (JTF)
- Focus on regions heavily reliant on fossil fuels
- Support for clean energy and green jobs

**Just Transition**

# SITRANS PROJECT

**EU-funded initiative focusing on regions heavily affected by the coal phase-out.**

**Promotes place-based governance and tailor-made transformative policies for just energy transition.**

**Develops a model based on the principle of "leaving no one behind" by assessing socio-economic impacts.**

**Establishes the Just Energy Transition Observatory (JETO) to design, host, and monitor evaluation models using clear indicators.**

## Just Transition Governance & Policy Framework

Alignment of local and regional strategies with governance structures for a just energy transition.

## Public Engagement & Capacity Building

Enhancing public participation through the JET Observatory platform and developing educational programs to empower citizens.

## Tackling Energy Poverty

Addressing energy poverty with indicator analysis and educational initiatives at the regional level to improve access to clean energy.

## Sustainable Energy Project Pipelines

Creating and supporting coherent plans for energy performance improvements and building local alliances for sustainable energy projects.

## Communication & Dissemination Strategies

Organizing dissemination plans, stakeholder mapping, and boosting public outreach through dialogue and networking activities.

## Sustainability, Replication & Exploitation

Conducting needs analysis and developing strategies for scaling up, replicating, and transferring best practices in just energy transition.

# Local Impact and Stakeholder Engagement

---

**- Involvement Of  
Local Authorities  
And Academia**

**- Positive  
Socio-economic  
Effects**

**- Community  
Acceptance And Job  
Creation**

---

**THANK YOU  
FOR YOUR  
ATTENTION**
